

Brock White is Here to Help

Since 1994, Brock White Canada's knowledgeable staff and quality products have made it the First Choice supplier of construction materials. The 2004 acquisition of MGI Canada has established Brock White as a fabricator of choice in the OEM industry. Additional acquisitions and expansions by Brock White have further enhanced their ability to serve the construction and fabrication market.

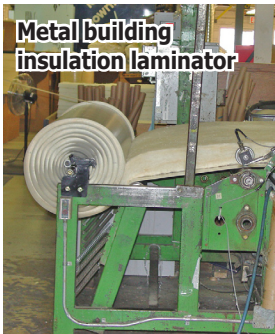

Our Custom Fabrication Service offers an effective solution to companies struggling with the high costs of labour and staff turnover. Let Brock White handle the fabrication so you can focus on your areas of expertise. Call to discuss how we can help.

Sliding table saw

YOUR RESOURCE.**

Custom Fabrication Service

Specializing in cutting, gluing and kitting of insulation and other low to medium density material.

- In a tight labour market, free up your staff for more important work
- Cost savings as a result of low loaded labour and low overhead
- Enables you to have lower inventory costs
- High quality and efficiency levels
- ISO certified facility
- Bar coding capabilities

We Offer

Kitting

With Brock White taking care of your kitting needs you can save time, money and space. With over 15 years of kitting experience we can address your needs while providing daily product delivery. Our kitting service offers:

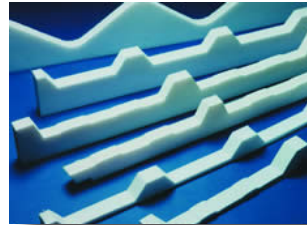

- Validation
- Traceability
- Bar Code Capabilities

Cutting

With our CNC cutting technology we have the ability to custom cut low to medium density insulation products as well as other substrates.

- CAD nesting software at our disposal
- Cut larger quantities
- Extreme accuracy
- Minimize Waste

Sub-Assembly

We can help you free up valuable resources in your facility by taking care of your sub-assembly operations.

We can eliminate:

- Time consuming labour
- Intensive Operations that slow output

Gluing

Various adhering capabilities include:

- Hot melt spray
- High temperature spray or roll
- Latex bath
- Pressure sensitive adhesives (PSA's)

Foam in Place Injection Moulding

We are able to produce a wide range of densities (0.5 - 30pcf) cast in moulds, sheet and bun stock.

Some of the benefits are:

- High R Value
- Combines strength with light weight
- Mold process results in a consistent quality product

<u>Density Range</u>	<u>Product Uses</u>
.05.....	Semi-rigid, water blown - for packaging
1.25.....	Floral decoration/opened mould
2.....	Flotation
2.....	Insulation for plastic & metal piping
2.....	Pour-in-place, void fill, taxidermy
2 - 3 lb.....	Insulation for doors/refrigeration/panel
4 - 5 lb.....	Foam for targets (archery)
6 -10 lb.....	Wood simulated cabinets, counter tops
12 -14 lb.....	Prosthetics
15 - 20 lb.....	Climbing walls
As Required.....	Prototype moulding

We Fabricate Insulation Elbows

RapidL

RapidL is a two piece long radius mineral fibre elbow that provides a consistent quality fit.

- Results in labour savings
- Thermally efficient product
- We can produce up to a 20" diameter

Mitered

Lower cost fiberglass and mineral fibre elbows are produced by cutting and gluing mitered sections. With our CNC abrasive wire cutting capabilities we have access to producing a wide range of sizes out of existing stock.
