call 604-299-8551

PRESENTED BY

Enzo Saponaro, President
DIV 7

ABOUT 3M 3015

3M™ Self-Adhered Air and Vapour Barrier 3015 is a translucent membrane that uses an acrylic adhesive that provides an extended application temperature range between -18°C (0°F) to 66°C (150°F). It does not require primer for most substrates and can withstand up to twelve months of UV exposure. The 10-mil engineered sheet membrane self-seals against nails and staples. It also conforms to contours for continuous bonded contact. The 3M™ Self-Adhered Air and Vapour Barrier 3015 is eligible for LEED® green building program credits.

AGENDA

Each session will include the following:

- Overview of 3M™ 3015 Features & Benefits
- Hands-On Product Demonstration
